

Running Program #2 – The Intermediate Program

The use of a planned and structured program will help to improve your cardiovascular fitness and running performance. **The minimum requirement for a career firefighter is a score of 9.6 on the shuttle run.** The days of long, slow distance running to improve aerobic capacity are **out-dated** with research backing this up.

The program expects that you can run 1km in less than 7mins. This program utilizes a 3-speed running method (jog, run & stride). A jog is typically speed ~40%, a run is a speed ~60% and a stride is a speed ~80%.

On the right-hand side of the program you can fill in the distance and RPE of each session. Smart watches and phones typically have the ability to track running distance or provide the option to download an app to assist. RPE is a subjective method of tracking intensity using a 1-10 scale, where 1 is very easy and 10 is maximal effort.

A practice shuttle run has been incorporated into the program upon completion of week 2, 4 and 6. This will give you practice at running the shuttle run, so you are familiar with the test protocols and understand the rules for elimination.

It is expected you will progress onto running program 3 from here in preparation for your shuttle run testing day.

Practice Shuttle Run

RPE 10	MAX EFFORT ACTIVITY Feels almost impossible to keep going. Completely out of breath, unable to talk. Cannot maintain for more than a very short time
RPE 9	VERY HARD ACTIVITY Very difficult to maintain exercise intensity. Can barely breathe and speak only a few words
RPE 7-8	VIGOROUS ACTIVITY Borderline uncomfortable. Short of breath, can still speak a sentence
RPE 4-6	MODERATE ACTIVITY Breathing heavily, can hold a short conversation. Still somewhat comfortable, but becoming noticeably more challenging
RPE 2-3	LIGHT ACTIVITY Feels like you can maintain for hours. Easy to breathe and carry a conversation
RPE 1	VERY LIGHT ACTIVITY Hardly any exertion, but more than sleeping, watching TV, etc
