The use of a planned and structured program will help to improve your cardiovascular fitness and running performance. The minimum requirement for a career firefighter is a score of 9.6 on the shuttle run. The days of long, slow distance running to improve aerobic capacity are out-dated with research backing this up.

The program is for experienced runners who run regularly. This program utilises the 3-speed running method but has an increase in the overall volume which is suited to those with a solid running base.

On the right-hand side of the program you can fill in the distance and RPE of each session. Smart watches and phones typically have the ability to track running distance or provide the option to download an app to assist. RPE is a subjective method of tracking intensity using a $1-10$ scale, where 1 is very easy and 10 is maximal effort.

A practice shuttle run has been incorporated into the program upon completion of week 2,4 and 6 . This will give you practice at running the shuttle run, so you are familiar with the test protocols and understand the rules for elimination.
It is expected that by the end of this program you are reaching a minimum score of 9.6 on the shuttle run.
